Art Unit: 2612

1. This Office action is in response to the application filed May 27, 2005. This application is a 371 of PCT/US03/34812, filed October 30, 2003 which claims the benefit of provisional application 60/422,759, filed October 30, 2002. Claims 1-5 are pending.

2. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The disclosure is objected to because of the following informalities: In page 2, line 2 there appears to be missing text. See "\*\*\*\*". There are five drawings, but the brief description of the drawings only refers to four figures

Appropriate correction is required.

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 1, it is not clear how a cellular modem can be used for connectivity outside of the radio communication network since it is a part of the radio network.

Art Unit: 2612

Regarding claim 4, it is not clear how a slave host computer can include a computer system. This limitation appears to be recursive.

Regarding claim 5, it is not clear if the steps of repeating and transmitting performed by the master host computer are the same steps.

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fierro et al (6,747,571).

Regarding claim 1, the claimed host computer is shown as item 15 in Figure 1; the claimed communication network is shown as item 30; and the claimed slave host computers are shown generally as item 50. Fierro does not show a dial-in phone modem. The use of dial-up modems for transmitting meter data is conventional. It would have been obvious to include both wired and wireless communication to provide a level of redundancy in the system.

Regarding claim 2, see col. 6.

Regarding claim 3, the use of a spread spectrum radio is taught in col. 6. The master radio is shown as the radio connected to the host computer in Figure 1. The slave radios are shown as the transmitters connected to the meters. Fierro does not show a repeater, however, the use of repeater in a cellular phone network is conventional. It would have been obvious to include a repeater to extend the range of communications.

Art Unit: 2612

Regarding claim 4, the use of spread spectrum radios has been addressed above. The claimed computer system is shown as the processor in Figure 3.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Albert K. Wong whose telephone number is 571-272-3057. The examiner can normally be reached on M-Th.
